

IN THE SPECIFICATION

ABSTRACT OF THE DISCLOSURE

As an imaging prevention method for interfering unauthorized imaging of a number of visual image images projected on a screen, there is employed a method for projecting infrared light to a viewer/audience direction from at least one or more infrared light projector ~~means~~ devices disposed at a rear side of the screen. According to the method, an amount of ~~the~~ infrared light ~~directly~~ is directly incident into an imaging apparatus whereby increasing the prevention effect ~~since~~ causes more infrared light is to be directly incident into the imaging apparatus of a person conducting the unauthorized act.
